

New Holland extends variable chamber baler offering with premium Pro-Belt baler

- *The new Pro-Belt round baler will be previewed at local events in some key markets prior to the launch to the public at the SIMA and Eima shows*
- *The Pro-Belt premium baler stands out for its versatility and productivity in all crop conditions, the high bale density, and its exceptional reliability and durability*

Basildon, 10 March 2022

New Holland Agriculture extends its variable chamber round baler offering with the new Pro-Belt Series. This premium round baler is a versatile, high-performance and durable baler that delivers excellent bale shape in all crops and conditions.

Simon Nichol, **Head of Hay & Forage Product Management** (Self-Propelled Windrower, Cutting & Crop Preparation, Variable Chamber Round & Small Square Baler and Bale Wagon), stated: “We developed the Pro-Belt Series to meet the specific needs of contractors and farmers who clock up a high annual use of their balers. Its dependability is a key success factor for them, as it performs equally well when the harvesting windows are anticipated or postponed. It stands out for its exceptional productivity in all crop conditions, delivering high bale density that helps maintain the nutritional properties of the freshly harvested crop. What’s more, this outstanding versatility and performance comes in a stylish, streamlined design.”

The Pro-Belt has been designed based on feedback New Holland collected through numerous customer test-drives conducted across the world – from North America to Australia, New Zealand and Europe, collectively producing 150,000 bales. Participants clearly expressed the performance characteristics they considered fundamental: crop versatility, capacity, and bale density and appearance. The new baler delivers on all counts with outstanding performance.

The new baler has been developed for reliability and durability, with a split gearbox for high mechanical efficiency and robustness and a streamlined design with fewer, stronger components and moving parts. The heavy-duty 520 mm-diameter rotor in combination with the active drop floor provides constant feedback to the operator, enabling them to maximize productivity with high throughput and non-stop feeding. It performs equally well in silage and dry straw, producing consistently high bale density and perfectly formed, firm bales for easy handling and stacking. With a capacity up to 30 tons per hour and 140 kg/m³ in straw, the Pro-Belt will enable customers to bale their crop faster, finishing their field in less time with fewer bales.

PRESS RELEASE

New Holland will preview the new Pro-Belt Series in demonstrations and local events in France, Italy and the UK during the first half of 2022, in preparation for the official launch to the public in November at the SIMA show in Paris, France and Eima exhibition in Bologna, Italy.
